

SolarOne
A FONROCHE LIGHTING BRAND

**Sustainable,
Efficient
Lighting**

About SolarOne

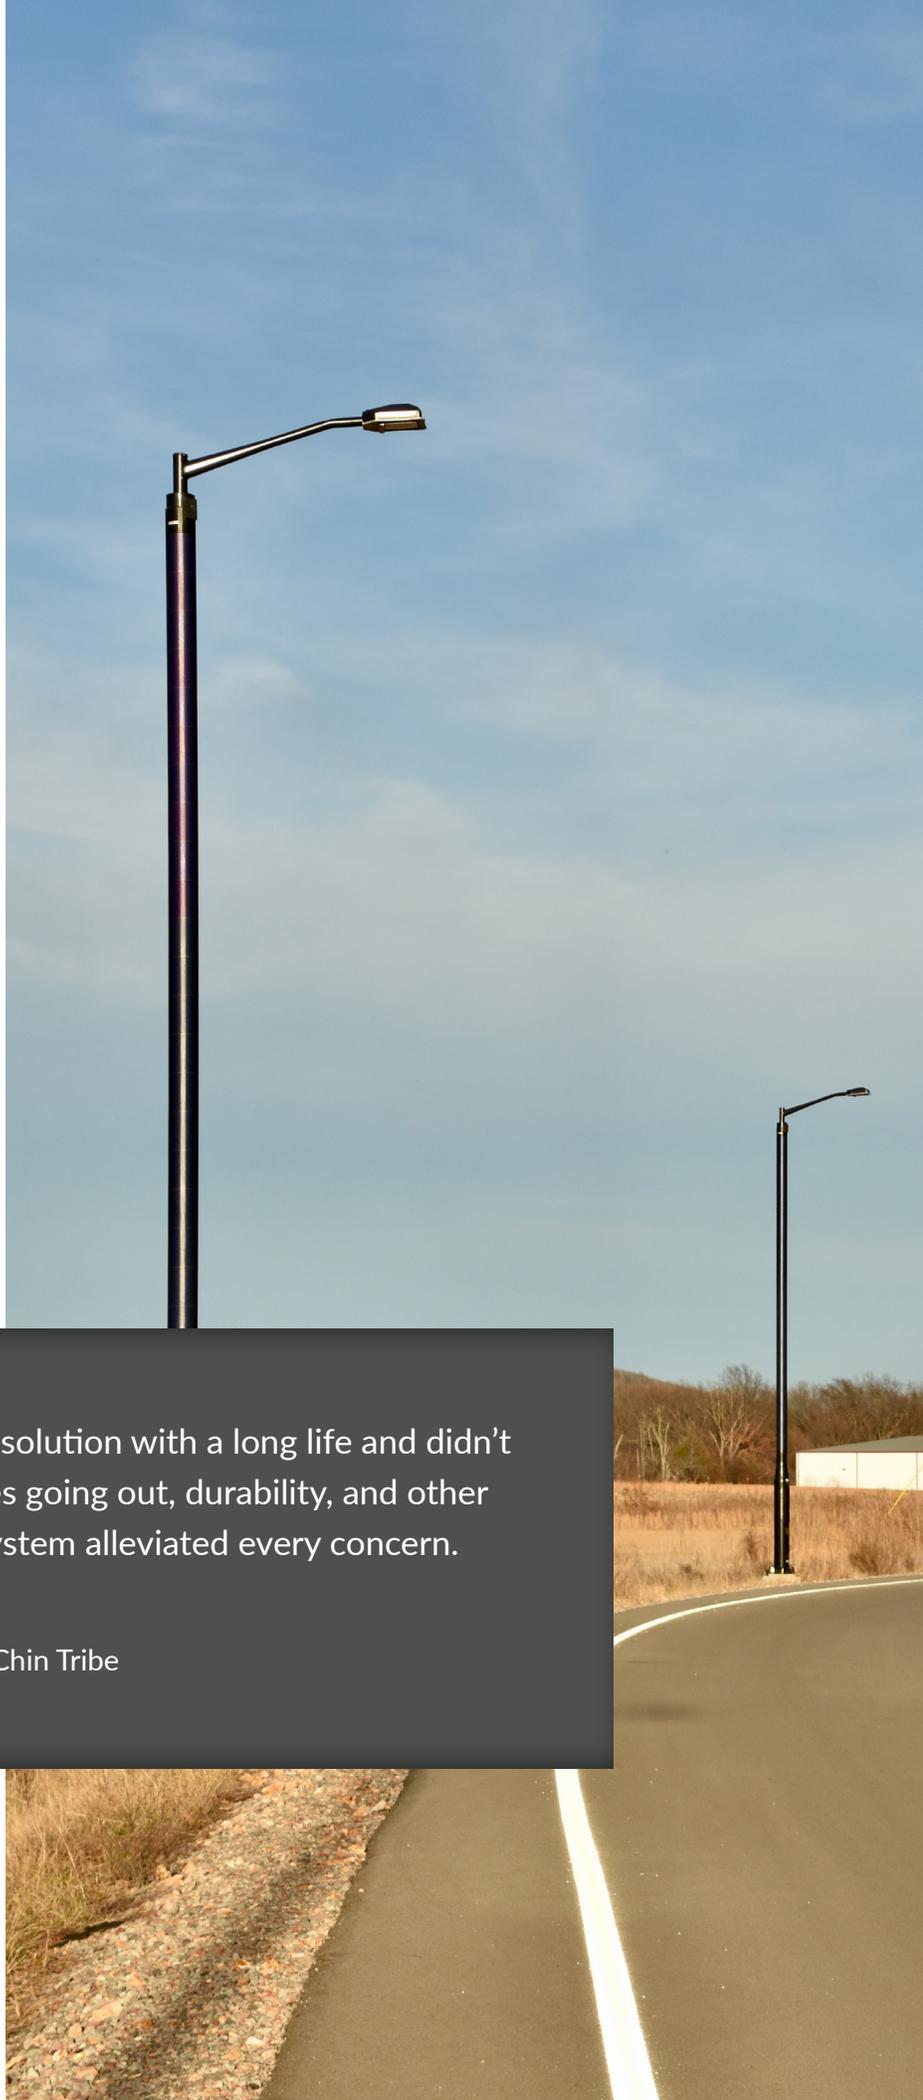

The future of lighting is sustainable and off the grid, which is why SolarOne has quickly become the leading solar lighting company in the United States. Public lands and facilities around the country take advantage of SolarOne technology to create well-lit, environmentally-friendly spaces.

For 15 years, our technology has changed the economics of infrastructure planning. Because solar lighting does not rely on the traditional power grid, it offers greater flexibility that conventional lighting simply can't match. We even offer products with a unique solar wrap.

We wanted to find a reliable solution with a long life and didn't want to worry about batteries going out, durability, and other factors. The Design Series System alleviated every concern.

Bartholomew Smith,
Community Project Manager, Ak-Chin Tribe

Why Us

SolarOne offers lighting solutions that are a perfect fit for any project where conventional grid-based lighting would have been the only viable option in the past. Streets, parking lots, and pedestrian spaces can all benefit from the implementation of our lighting technology. SolarOne installations are low-maintenance and high-output, meaning they are less

expensive, require far less attention, and mitigate at least some of the headache of managing public infrastructure. What's even more impressive is that, because our lights are powered by the sun, there is virtually no need for underground work. This means there's no need for repaving, no new trenching, and it has little impact on the environment.

Where We Work

- * Local Municipalities
- * Military Bases
- * Native American Tribal Land
- * Federal Facilities

SolarOne offers low-maintenance, high-efficiency, high-output lighting off of the traditional grid.

What are you waiting for?

Benefits

Save Money

Eliminate the cost of trenching, wiring, switch-gear and soil remediation.

Say Goodbye to Emissions

With our solar lighting systems, you can add illumination without adding CO₂ emissions.

Prepare for the Future

Solar lighting provides lighting & increases safety during grid-power outages. Some configurations are flood tolerant too.
